wireless headsets for the office

## Plantronics wireless office headsets

Whatever your job, or your personal way of working, you'll find a Plantronics wireless headset that will meet your specific needs. No-one offers a wider range, or has more experience – we've been in this business for over 40 years.

In that time, we've supplied headsets for people travelling to the moon, so you're in good hands.

**Voyager™ 510 System**  
use it with your office phone and your mobile

**CS60**  
flexible, cost-effective, convenient

## why go wireless?

If you've ever tried to cradle a telephone between your shoulder and your ear, in order to hand-write or key in some notes, you may not need much of an answer to the question – 'why go wireless?'.  
At Plantronics we believe you should be able to talk whenever, however and wherever life takes you. These days, that might be the other side of the world, but it's just as likely to be the other side of the office. Enjoy your newfound freedom.

the executive choice

**SupraPlus™ Wireless**  
if you're on the phone most of the day

## the freedom of the office

The way people work is changing. Most of us used to sit, virtually tied to a desk all day. Now, with laptops outselling desktop computers, and 90%<sup>1</sup> of workers able to use their computer away from their desk, most people live life on the move – including office-workers. So why be restricted by a phone-line?

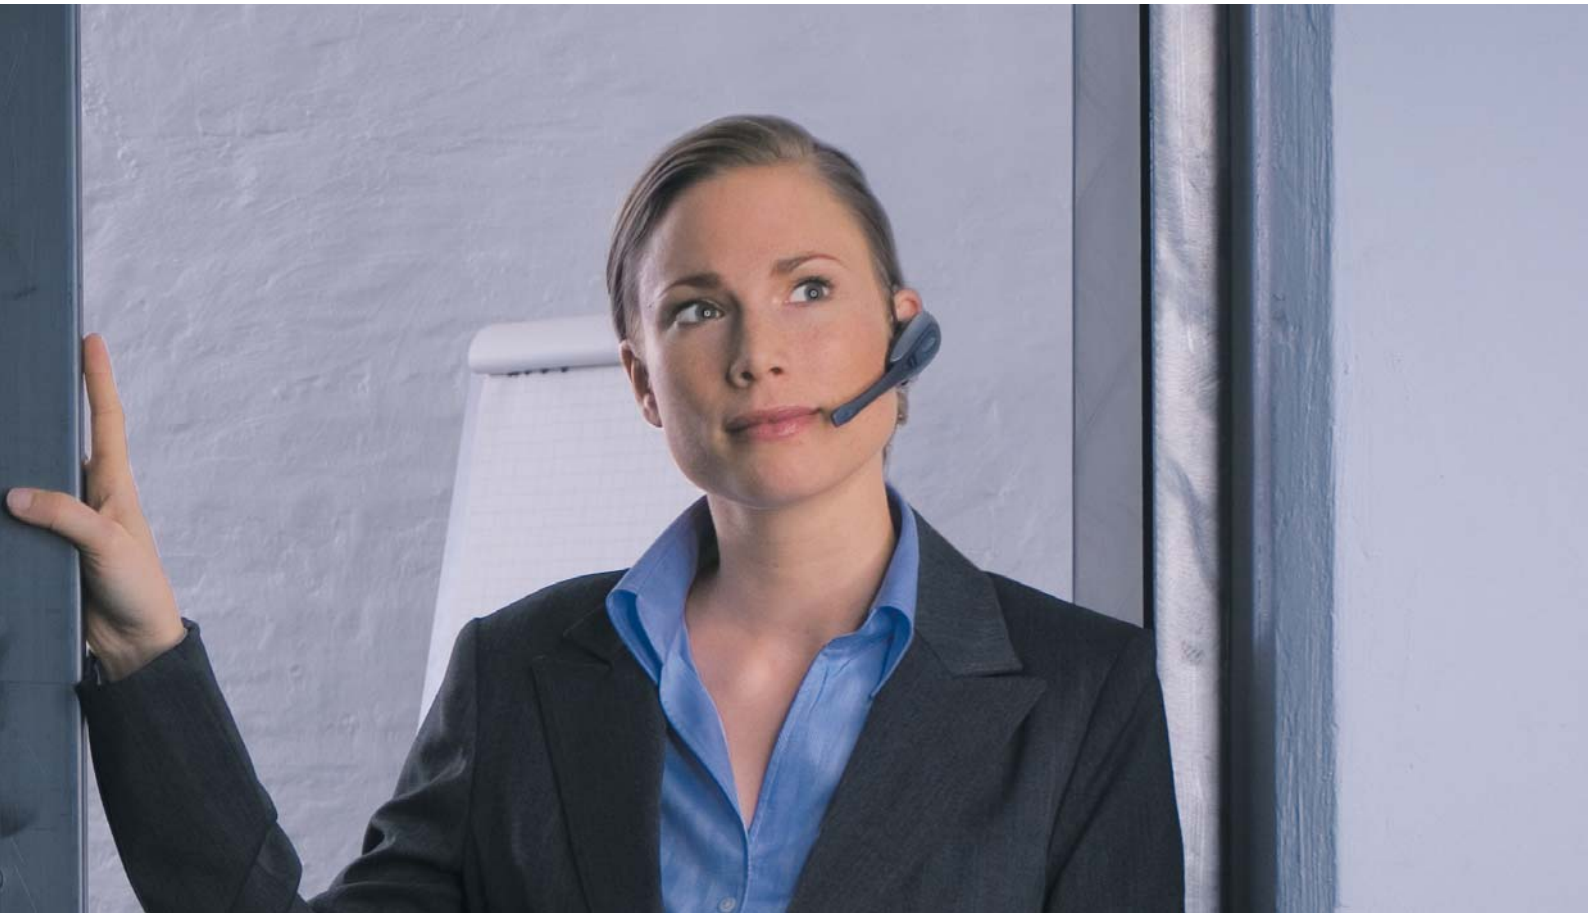

Why not cut the final cord that ties you to your desk?

Wireless headsets – alongside a whole new wave of devices, software and services – enable you to control where, when and how you work.

You can talk and walk, write and type, search and surf. You may just want to stand up and wave your hands. Or you may want to grab a glass of water during a long conference call. Multi-tasking has never been so easy.

According to a study by DEGW, 70% of business calls fail to get through first time. And yet, very often, you could give or get a quick answer to a question – instead of constantly listening to and exchanging voicemails or emails.

<sup>1</sup>21<sup>st</sup> Century Office by Jeremy Myerson and Philip Ross

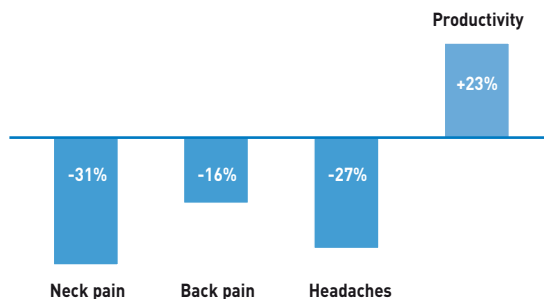

### in control

Think how much more efficient life could be if you were fully in control of when and where you take each call. No wonder that research by HB Maynard & Co showed that overall productivity could be increased by up to 43% simply by using a headset, rather than a handset.

### it's painless really

In a study by the University of Surrey, headset users experienced 31% less neck pain, up to 16% less back pain and 27% fewer headaches, compared to handset users. It's obvious really – the traditional phone just isn't designed to free up your hands.

Use the Plantronics Voyager 510 System with your mobile on your way into work. As you walk into range of your desk-phone, your headset automatically detects it, so that you can then take calls on either phone.

Keep talking while you retrieve a relevant document from a colleague or from another file. Keep typing or writing whilst concentrating on exactly what your caller is saying.

## wireless office headset range

### Plantronics Voyager 510 System

Life is complicated enough without having to manage two headsets – one for your mobile, one for your desk-phone. The Voyager 510 System works with both – automatically detecting whichever phone is in range, and allowing you to switch between calls.

The system works with any Bluetooth® mobile phone and includes an adapter to Bluetooth enable virtually any desk-phone.

The headset is simple, convenient and looks great – so comfortable and light you could forget you are wearing it.

 Bluetooth®

### CS60

As a general purpose wireless headset, the CS60 is hard to beat. It is cost-effective and lets you roam the office without missing a call. A choice of wearing styles allows you to decide what works for you.

Pop over to the coffee-machine while you're waiting for an important call. Drop in to that team meeting, and know that you are still available to clients.

If you work on a helpdesk and this involves helping fix problems over the phone – PCs or photocopiers, for example – then imagine how much easier it would be for you to walk over and handle the equipment you are talking about whilst still on the call.

**CS70**

No-one questions the productivity benefits of headsets. Some people still need to be convinced by the style of headset on offer. Well, here's the answer. Taking its design cue from Bluetooth® mobile phone headsets, but using DECT™ technology for superior range and sound quality, the CS70 is discreet, stylish and functional.

**SupraPlus Wireless**

There are many telephone-intensive jobs – such as helpdesks and contact centres – where it can be a real bonus to be able to move away from your desk whilst on a call.

And with the SupraPlus Wireless – based on the world's best-selling SupraPlus headset – your freedom to roam doesn't compromise sound quality or comfort. The binaural version cuts out the noise around you – leaving you free to concentrate on the job at hand. And the quick pair feature allows multiple headsets to share one base so that shift workers, for example, have their personal, fully-charged headset at the start of their working day.

<sup>2</sup>requires HL10 or electronic hookswitch control

## frequently asked questions

**Q: Are there health risks associated with wireless headsets?**

A: No, only health benefits. DECT is a short-range radio technology which transmits at a much lower output power than a typical mobile phone. According to current scientific knowledge, there are no known health risks associated with DECT telephones and the power they transmit falls well below permissible safety limits.

**Q: How many wireless headsets can I use within my office?**

A: For a typical office, 70 wireless headsets can be used with no problems. It is possible to use more than 70, but you should contact Plantronics to complete a site survey questionnaire so that we can advise based on the building structure, layout and other environmental factors.

**Q: What range can I expect?**

A: Open-space range with DECT headsets (CS60, CS70 & SupraPlus Wireless) is up to 100m. In a typical office, which has walls, partitions, etc. the range is about 50m, although there are many variables which can effect this. Our Voyager headset is based on Bluetooth, which has an official range of 10m, but can often provide twice that.

**Q: Should I be concerned about security?**

A: Security is one of the strong points of a DECT technology, which uses digital radio and dynamic channel selection together with a three-layer security system (including digital encryption). The Voyager 510 bluetooth system is also very secure, using 128 Bit encryption which is very difficult to intercept without the use of expensive and specialized equipment.

Sound Innovation™ for missions to the moon. And for everyday life on this planet, too.

In 1969, a Plantronics headset carried the historic first words from the moon: "That's one small step for man..." From the man on the moon to the man on the street, Plantronics is an innovation leader dedicated to creating communication solutions for people who understand and appreciate the real freedom of space. From outer space to inner space, find your space.
